### **Research Interests**

The research of the group is focused on studies of electron transfer reactions and interfacial properties of proteins and enzymes and on the development of biosensors. In close collaboration with other groups at Hakim Sabzevari University, we study electron transfer reactions at various electrode beds (such as polymer nanocomposites) and bioelectrocatalytic properties of proteins and enzymes for the development of electrochemical enzymatic biosensors for clinically important analytes. We try to investigate using enzymes in the Microchip Technology.

**Key research directions:** Electrochemical biosensor development; Nanobiosensors; enzymatic biosensor development; Electron transfer reactions and interfacial behaviour of proteins
